

# Don't do more. Lab Wisely.

- Don't collect more blood than what is needed. Use short draw tubes, consider add-on testing, and reduce or combine duplicate orders.
- Don't collect extra blood tubes in anticipation of test orders.
- Don't support repeat test ordering (re-testing) at a frequency that is not backed by evidence.
- Don't routinely repeat critical results for most common analytes before reporting.
- Don't allow standing orders for repeat testing without a stop or review date.
